Forecast

A 7-day and 30-day revenue forecast could be implemented using a dedicated BigQuery forecasting model. It was not included in this prototype because the available history begins in July 2025 and is insufficient for robust multi-year seasonality analysis.

Data note: Customer segmentation is based on prior orders during the preceding 12 months. Because the source data begins in July 2025, early orders may not have a complete observable 12-month history.
